

Trip Analysis – Sky Transport Operations Dashboard

Objective: Sky Transport operates a large fleet of shipments across multiple states and cities. Despite growing trip volumes, the leadership team lacked a unified view of operational efficiency, financial performance, and route profitability. Decisions were being made on fragmented spreadsheets with no real-time visibility into which routes were profitable, which regions had high empty miles (wasted capacity), or which customers drove the most revenue.

The Goal:

- Track Logistic efficiency
- Monitor revenue and costs
- Analyze trip utilization
- Identify high/low performance regions

Business Solution: A fully interactive **Power BI Trip Analysis Dashboard** was developed to consolidate all shipment and trip data into one operational control center. The dashboard enables stakeholders at every level — from operations managers to the CFO — to monitor KPIs, drill into regional performance, compare trip types, and identify cost-saving opportunities in real time.
